

**Press Release**  
Aalborg, Denmark  
February 17, 2016

## **New 2solve version will exploit both Big Data technology and smart algorithms for boosting productivity in network operations**

**Aalborg, Denmark - February 17, 2016 - 2operate today announced that it has released version 3.0 of its groundbreaking operations automation solution. The new release of 2solve exploits state-of-the-art Big Data technology taking automated network assurance to another level. In addition, the upgrade includes a novel concept for preventive incident discovery based on standardized Key Performance Indicators.**

2solve, the leading network assurance solution using advanced algorithms for boosting productivity in network operations, will stay in front when it comes to support and automation of operational processes. 2solve is known among its users for simpler user interfaces with faster response times than traditional OSS tools in the market. With the new release, extremely low response times are guaranteed independently of how much the network is scaled. The purpose is to enable larger and more complex networks, as well as for automated analytics down to low-level components in network elements and individual mobile service subscribers.

*"We are very proud of releasing this new 2solve version.",* said Christian Ingerslev Sørensen, CEO of 2operate. *"It is crucial that we listen to current and potential customers to understand their needs and to constantly innovate our offerings. I believe that we are among the best in the market to evaluate the technological options, make the right choices to match demands, and then turn these into practical solutions."*

### **About 2operate**

2operate simplifies Network Assurance in several countries across and outside of Europe. We have developed an operations automation solution including 'an artificial brain' for automated diagnostic reasoning inspired by methodology from the medical domain. Using 2solve, a network operator organization is able to boost productivity by allowing both front and back office staff to understand the network better. 2operate has established itself as an innovative solution provider in the OSS and Network Assurance market. Based in Aalborg, Denmark which has been a center of telecom innovation since the first generation of mobile communications, 2operate, together with its customers, constantly seeks efficiency and simplicity in network operations.
